Meet Molly

- **Name** Molly Ann Hanly
- **Breed** Bordoodle (Border Collie x Miniature Poodle)
- **Age** 4 Years
- **DOB** 25 March 2015

1 Food

1.1 Regular Meals

Molly's main food is [Hill's Science Diet Sensitive Stomach & Skin Adult Dog Food](#). She eats one cup in the morning (usually about 8-9am) and one cup in the evening (usually about 7-8pm).

In her morning meal we include 1ml of [4cyte joint supplement](#).

Sometimes we will add small amounts of other food to Molly's kibble:

- Banana
- Blueberries
- Tuna (spring water cans)

- Pumpkin
- Egg
- Yoghurt
- Small dash of milk

1.2 Treats

We usually use [vitapet milky sticks](#) for training treats.

1.3 Allergies

- Molly loves chicken but can give her diarrhoea
- Molly loves bones (e.g. uncooked beef bones) but these can give her an upset stomach (constipation/diarrhoea)

2 Exercise

Molly needs 40-60 minutes of exercise a day, usually in two 20-30 minute sessions, one in the morning and one in the evening. Because of her breed, she needs physical and mental exercise everyday. We usually mix up her exercise with combinations of walks, ball time, games and tricks.

2.1 Walks

Molly loves to go for walks and will do lots of sniffing and scenting. She (usually) doesn't pull ahead on the leash but she will pull to either side to follow a smell that she likes.

Note

Scavenger Molly is a bit of a scavenger on her walks and if she gets a chance she will eat things like discarded chicken bones, takeaway, or poop (cat, possum, sometimes dog).

Other dogs When out walking, Molly will usually greet other dogs in the manner they greet her: if they ignore her she will ignore them, if they give a friendly hello she will give a friendly hello, if they are aggressive, lunging or barking she will react in the same way.

2.2 Ball

Molly's absolute favourite thing is to chase her ball. She will bring it back to you but usually likes to sit and "mind" her ball, rather than immediately give it up for another throw. She will play fetch all day, even until her hips are sore, so we always leave plenty of breaks between throws and limit the length of a fetch session to 10 minutes or so. She will quickly chew through a tennis ball so we always use the durable orange ball

Note

Molly is very possessive of her ball so never let her play with her ball around other dogs. If a dog approaches her while she is "minding" her ball she will snap at the dog.

2.3 Games

Molly loves lots of games and these are a great complement to her more physical exercise (or a good substitute if it is too wet for a proper walk).

Games we play with Molly include:

- Find the toy (hide toys around the house and Molly will find them and bring them to you)
- Fetch the slippers (Molly finds the slippers and brings them to you)
- Hide and seek (have Molly stay in one room then hide in another room; call her to find you)
- Tug-of-war
- Other mental stimulation e.g. lick mats and kongs

2.4 Tricks

Molly knows lots of tricks and commands. These can be chained together in any combination for a fun exercise session.

- Sit
- Paw
- Down
- Down (from a distance)
- Stay (and come)
- Hop up
- Paws up
- High five
- Hide
- Heel (Right: “Heel to me”; Left: “Switch sides”)
- Cheers

3 Health

3.1 Vet

Vet

Molly's vet is Hurlstone Park Veterinary Hospital * 02 9558 4181 * hurlstoneparkveterinaryhospital.com.au * 739 New Canterbury Road, Dulwich Hill, NSW 2203 * hpvets@hurlstoneparkvet.com.au

3.2 Vaccination

Molly is fully up-to-date with annual vaccinations (C7). She receives her vaccines annually in June.

3.3 Fleas and Worms

Molly takes a monthly tablet for fleas, worms, ticks etc. She takes [NexGard Spectra](#) (for 15-30kg dogs) on the 13th of every month.

3.4 Desexing

Molly is desexed.

3.5 Hip Dysplasia

Molly has hip dysplasia. This is generally doesn't cause any issues and is kept in check by limiting the extent of her physical exercise sessions. In her morning meal we include 1ml of [4cyte joint supplement](#). Molly will get lame, stiff, or sore if she is given too much physical exercise.

3.6 Grooming

Molly is fastidious with her own grooming and will usually spend time every morning and evening grooming and “cleaning” her paws. Her coat is non-shed and can get matted easily so we pick out any burrs etc straight away and comb her regularly, especially her ears which are prone to knots otherwise.

4 Behaviour

4.1 At home

Molly is a very good girl at home and will spend most of the day between her walks asleep. She generally won't bark at passers-by, doorbells etc (and we sternly tell her "no barking" if she ever does). She does like to sit in a comfy spot and at home she is allowed on the couch but she knows she has to be "on your blanket". She likes a little snuggle in the morning and evening and she has an inbuilt alarm clock set to 5pm for evening walks. She doesn't counter surf or chew things (apart from her toys).

4.2 Being left alone

Molly is fine to be left alone in the home and will usually just sleep on our bed if we are out during the day. As a puppy she would get anxious and whine when we left her alone but we got through that by following some common advice, which we recommend:

- Give her some time to get comfortable in a new space before leaving her alone
- Make sure she is toileted, fed, and exercised before leaving
- Don't make a fuss when leaving, just say "Molly, mind the house"
- Don't make a fuss when returning - we will usually completely ignore her for a minute before saying hello.

4.3 With other people

Molly is generally great with other people and will sometimes want to stop and say hello to people on walks. If she gets too excited she might try to jump up to say hello (we say "no jumping"). She is always very gentle with children.

4.4 Outside
